

Solid Cast

Process Pigs & Utility Pigs

Our line of solid cast pigs is the best of both worlds. They have the flexibility and easy handling of the foam pigs but also the durability and sealing capabilities of steel pigs. The one-piece design allows the pig to expand within the line pressure to improve the sealing capacity.

Durometer Matters

Each of our solid cast pigs can be customized by various durometer. Typically our pigs are manufactured with a 70-75 durometer which is firm but also enables flexibility. Since no two lines are alike, customization is often recommended. If you are requiring a softer, flexible pig for your applications a 65 durometer would be an excellent choice. For pigging applications that require a firm, yet somewhat flexible execution, the 80-85 durometer would be an excellent selection.

Solid Cast Process Pigs

PDP Product Displacement Pig

The PDP design offers the ability of batching and displacement of products in lines with 1.5 degree bends. With multiple sealing discs, cross-contamination and bypass are no longer a problem.

SWP

Achieve higher efficiency in product displacement, batching and liquid removal with the SWP product line evacuators. SWP will ensure that less product will be wasted, and will also help produce more efficient, faster processing results.

VPR

The VPR design has tight scraping/sealing rings that are made for extra flexibility and negotiating fittings. The durable design ensures a liquid-tight seal for maximum efficiency.

Additional Options

Various materials such as FOOD GRADE and HIGH TEMP. Magnets can be embedded.

Custom duro and colors available.

Solid Cast Utility Pigs

The solid-cast pig series is constructed of high-grade abrasion and chemical resistant solid-cast polyurethane material. It is capable of negotiating tight-radius bends as well as varying internal diameters of nominal pipe. The design allows the pressure of the line to seal the outer sealing surface of the cup against the internal pipe surface to ensure a positive seal.

UFCP SOLID CAST URETHANE 3-CUP PIG

Strategically placed cups make it possible for the pig to navigate through restrictions in valves and pass through tees.

UFDP SOLID CAST URETHANE FLEX-I DISC PIG

The design of the multi-disc ensures that sealing elements are always centered in the pipeline

UFDCP SOLID CAST URETHANE CUP DISC COMBO PIG

Best of both worlds in one design.

UFDPSE SOLID CAST URETHANE SQUARE EDGE

Square edge design feature has a great surface area for the ultimate cleaning power.

Additional Options

- Custom duro and colors available.
- Magnets can be embedded or installed.
- Brushes can be added on select models.
- Cavities for tracking units.
